

PRECISION HAIR RESTORATION

Patients book their own consultation.

A real open time on your calendar, confirmed before they close the tab. One ten-minute setup on your side, done once.

Right now, a new enquiry is a promise to call them back.

Someone fills in a form. Your team has to notice it, call, miss them, leave a message, and try again. In the meantime that person is on two or three other practices' websites doing exactly the same thing.

After this, they choose a time you are genuinely free, confirm it with a code sent to their phone, and it is on your calendar. No phone tag, and nothing sitting in a queue overnight.

Five short screens.

01 — DETAILS

Four fields.

Name, email, mobile, and consent to be contacted. No health question on this screen at all.

02 — CONTEXT

Three short questions.

Closest match on a standard scale, age range, whether they have had a procedure before, and in person or virtual. Each one only affects how the appointment is scheduled.

03 — TIME

A real open slot.

Only times you have published. They confirm with a code texted to their phone, and the appointment is written to your calendar.

Your page is live now at more.phillyhairmd.com/c/consult and is not yet shown to anyone.

THEIR DETAILS

Four fields, then straight on.

The shortest possible start. The screen tells them plainly that no health question is asked here and that nothing they type reaches an advertising platform.

Your phone number sits beside the form the whole way through. Anyone who would rather speak to a person still can.

1 OF 5 · YOUR DETAILS

Schedule your consult.

Four fields. No health question on this screen, and nothing typed here reaches an advertising platform.

Your live page. more.phillyhairmd.com/c/consult

CHOOSING A TIME

Only times you have published.

60 minutes, in person or by video. The page reads your availability at the moment it loads, so nothing offered here is a guess.

This is the part the calendar connection makes safe. Until your calendar is connected, these times come from typed office hours rather than from your actual schedule.

5 OF 5 · TIME

Pick your time.

60 minutes, **in Philadelphia**. Only times the practice has actually published are shown.

Monday, Aug 17 3:00 PM	Monday, Aug 17 3:30 PM
Monday, Aug 17 4:00 PM	Tuesday, Aug 18 8:00 AM
Tuesday, Aug 18 8:30 AM	Tuesday, Aug 18 9:00 AM
Tuesday, Aug 18	Tuesday, Aug 18

Your live page. Real availability, read at page load.

Check your phone.

We sent a 4-digit code to **(555) 010-0000**. Enter it to confirm the appointment.

Resend in 27s

Wrong number? [Go back and change it](#). The code expires in five minutes.

Your live page. No appointment is created until this code is entered correctly.

CHECK YOUR PHONE

Four digits, so your calendar stays clean.

It usually fills itself in. On an iPhone the code appears above the keyboard, so most people tap once.

It expires in five minutes. Stated on the screen, not buried.

Nothing reaches your calendar without it. This is what keeps junk and automated submissions out of your day.

A wrong number is easy to fix. They can go back and change it without starting again.

WHAT YOU KEEP CONTROL OF

Nothing here happens without you setting it.

- | | | |
|---|---------------------------------|---|
| ✓ | You choose the hours | They do not have to be your full office hours. Most practices hold a narrower window for new consultations and are better off for it. |
| ✓ | You block time as normal | Anything you put on your calendar disappears from the booking page on its own. No second system to keep updated. |
| ✓ | Your team still confirms | Your coordinators keep doing exactly what they do today, including the reminder call the day before. |
| ✓ | You can pause it | Turning the page off is one change on our side and takes minutes. |

Your patient schedule stays outside our systems.

We ask you to create a calendar used only for new consultations, and to connect that one. It means the only thing our system can see or write is consultation availability. Your surgical list, your existing patients and every name on them stay where they are.

The booking page itself carries no advertising or analytics tracking of any kind. That is deliberate: the page asks about hair pattern and prior procedures, and that sort of answer must never be handed to an advertising platform.

THE ONE THING WE NEED

A connection, not a calendar link.

A shared link or a calendar export is read-only. It can be looked at, never written to, and it goes stale within days.

A shared link

Read-only, and out of date by next week

A two-way connection

Sees when you are busy, writes the new consult on

Two-way means both directions: your schedule tells the booking page when you are genuinely free, and every new consultation is written back onto that calendar. Google Workspace, Gmail and Microsoft 365 all work. A calendar that only exists inside your practice management system does not, and if that is your situation, tell us and we will find another way.

Create the calendar consultations will live on.

Recommended: a calendar used only for new consultations. Already have one? Skip to step 2.

Google Calendar

CALENDAR.GOOGLE.COM

- 1 Open **calendar.google.com** on a computer.
- 2 In the left sidebar, next to **Other calendars**, click **+** then **Create new calendar**.
- 3 Name it **Consultations**, set the time zone, click **Create calendar**.
- 4 To let a coordinator manage it: **Settings and sharing** → **Share with specific people** → add them with **Make changes to events**.

Microsoft 365 / Outlook

OUTLOOK.OFFICE.COM/CALENDAR

- 1 Open **outlook.office.com/calendar**.
- 2 In the left sidebar, click **Add calendar** then **Create blank calendar**.
- 3 Name it **Consultations**, then **Save**.
- 4 To let a coordinator manage it: right-click the calendar → **Sharing and permissions** → add them with **Can edit**.

Connect it inside RootLogic.

The same path for Google and for Microsoft 365. An admin can do this on behalf of any staff member, so one person can connect everyone.

- 1 Log in to **RootLogic**.
- 2 Open **Settings** → **Calendars**, then the **Connections** tab.
- 3 In the **My staff** dropdown, choose the person whose calendar this is.
- 4 On the **Calendars** tab, click **+ Add new**.
- 5 Choose **Google** or **Outlook / Microsoft 365**, sign in, accept the permissions.
- 6 Pick the calendar to **check for conflicts**, and the calendar new consults are **written to**. Usually both are the Consultations calendar from step 1.
- 7 Confirm the sync reads **two-way**.

The one thing that quietly breaks this: if the calendar is shared, whoever connects it needs **edit** access, not view access. With view access the connection appears to succeed and then never writes anything.

WOULD YOU RATHER WE DID IT

Ten minutes on a screen share.

You sign in, we drive.

If you would rather not work through it, book us ten minutes with whoever owns the calendar. You handle the sign-in, we do everything else and confirm it works before we hang up.

Two answers we need either way

- 1.** Which calendar should consultations land on, and whose account is it? The name, and the email address the calendar sits under.
- 2.** Which days and hours do you want held open for new consultations?

Send them to

Joe Garraffo · jgarraffo@vitalitymmg.com

Reply to this deck and we will book the ten minutes, or send the two answers and connect the calendar yourself. Either route works.

BEFORE A PATIENT EVER SEES IT

We prove it works, three ways.

- | | | |
|---|---|--|
| 1 | We book a test slot | Through the real page, and confirm the appointment appears in RootLogic. |
| 2 | We check your own calendar | The same appointment has to appear on your Google or Microsoft calendar, not just in our system. |
| 3 | We block a window and look again | We block time on your real calendar and confirm those slots vanish from the booking page. This is the only one of the three that proves the connection runs both ways. |

Until check three passes, your booking page does not go live and no advertising points at it. A one-way connection passes the first two checks and would double-book you, so we treat it as not connected.

Three things, and we launch.

01

Approve the page

Confirm you are happy with what patients see, and with self-scheduling being offered at all.

02

Connect the calendar

Steps 1 and 2, or ten minutes with us.
Then send the two answers.

03

We test, then launch

We run the three checks, then point your advertising at it and add it as a direct link in your ads.
